HFV Protocol Whitepaper

Token Overview

Name: HFV Token

Total Supply: 70,000,000 HFV

Note: All extra supply beyond 70,000,000 has been sent to a null address. The supply will remain fixed at 70,000,000 HFV as initially planned.

Contract Address: 0x339f4761FE6301455cC2B5ba281Ac177eC362D56

Token is verified and published on Etherscan.

We are working to audit the full HFV Token and the complete staking contract. All will be published and verified transparently for public view and audit.

The DApp UI is being tested and will be compliant before release.

We will update the progress and roadmap regularly.

We aim to attract more developers and contributors to structure a complete DAO.

There are no promises - only hard work and transparency.

Staking Mechanism

HFV uses a time-based staking structure that rewards long-term commitment with increasing APY tiers.

Staking durations: 21 days, 3 months, 6 months, and 12 months.

Smart contracts enforce lock durations and transparently calculate rewards based on a fixed multiplier model.

Formula: (HFV x 0.4 x 17.38 x Tier Multiplier)

Example: Staking 120 HFV for 3 months: 120 × 0.4 × 17.38 × 3 = 2506.56 HFV

Managed Funds (MF)

All transaction fees are routed to Managed Funds (MF), which redistribute to the PSF.

15% of tokens are locked from the start of ICO.

App, team, and marketing funds are also locked.

PSF (Protection Security Funds)

Receives transaction fees and locked tokens.

Ensures investor protection and funds for security mechanisms.

Roadmap & DAO Expansion

- Investment DAOs: Community-based project investment strategies

- Grant DAOs: Allocate funds to promising proposals

- Social DAOs: Organize for awareness and network growth

- Platform DAOs: Transparent protocol governance

Team & Open Source Contributors

- AI Engineers: Integrating machine learning insights for adaptive staking

- Web3 Devs: Smart contracts, token engineering, protocol audits

- DApp Builders: Frontends, staking calculators, analytics & dashboards

- Social Influencers: Driving adoption through crypto-native education & reach

- DAO Operators: Coordinating governance, transparency, and treasury allocations

Community Invitation

We're always looking for passionate individuals who resonate with the HFV Protocol vision.

If you believe this is something you'd truly love to be a part of - whether you're a developer, designer, strategist, or enthusiast - we welcome you to join us and help build a transparent, secure, and community-driven ecosystem.

Let's grow this together.
